

CheckWise Dashboard User Interface Redesign

Visual Showcase

Role:

Design Lead

Timeline:

6 weeks

Platform:

Internal Web App

- Highlights:
- Modernised internal dashboard legacy UI.
 - Enhanced KPI visibility, layout structure, and scannability.
 - Created a clean, enterprise-style SaaS interface.

UX Case Study – CheckWise Dashboard

UX Story - My Process

Project Context

CheckWise is an internal audit & checklist management tool used by enterprise teams. I was tasked with modernising its primary dashboard UI to improve clarity, visual hierarchy, and user satisfaction.

My Role

Sole designer responsible for UX research, information architecture, wireframes (Balsamiq), and UI design (Adobe XD).

Key Problems Identified

- Outdated UI with low visual hierarchy
- Unclear data grouping and visual structure
- Poor use of space and lack of contrast

Design Process

- Interviewed internal users to identify friction points
- Sketched multiple layout variations with pen & paper
- Created wireframes in Balsamiq
- Designed high-fidelity UI in Adobe XD
- Iterated over 5 versions before final delivery

UX Highlights

- Redesigned KPI cards for fast scannability
- Balanced data charts with tabular data
- Used sidebar structure as well as illustration to resolve spatial imbalance

✓ Outcome

- Positive feedback from stakeholders.
- Improved data clarity & dashboard usage.
- Helped standardise design for future internal tools
