

OpsBridge

Real-Time Exception Management Platform

A unified platform that connects field technicians and operations managers to detect, track, and resolve operational issues in real time.

KEY CHALLENGES ADDRESSED

Delayed Resolutions

Manual reporting and hand-offs lead to slower response times.

Lack of Visibility

Managers don't have real-time visibility into field issues.

PROJECT AT A GLANCE

Role

Product Designer

Users

Field Technicians
Operations Managers

Platform

Mobile App (iOS & Android)
Web Portal (Desktop)

Duration

12 Weeks

Problem Space & Opportunity

Turning Operational Chaos Into Clarity and Control

**The Core Challenge:** Disconnected tools, siloed teams, and delayed information create friction that slows issue resolution.

HOW OPERATIONS BREAK DOWN TODAY

WHY THIS MATTERS

Operational Delays
Issues take longer to resolve.

Higher Risk
Missing visibility increases compliance and safety risks.

Reduced Productivity
Teams spend time coordinating instead of solving problems.

The Opportunity
Create a unified platform that connects people, processes, and data — delivering real-time visibility, smarter workflows, and faster resolutions across the entire operational ecosystem.

Connected Workflow Map

Coordinating Decisions Across Field and Operations Teams

Why Separate Interfaces?

Field Technicians

- Fast reporting
- Offline resilience

Operations Managers

- Decision support
- Workflow oversight

Decision Architecture

Managing Exceptions Through Structured Resolution Paths

Operational Resilience & State Handling

Designing for Real-World Uncertainty

EXCEPTION STATE MATRIX

Handling exceptions across different operational states and recovery scenarios.

Offline

- Action stored locally
- Syncs when connected

Missing Information

- Submission blocked
- User prompted to complete

Escalated

- Routed to specialist
- Manager notified

SLA Breach

- Alert triggered
- Escalation required

Resolved

- Status synced
- Issue archived

ROLE PERMISSIONS

Clear boundaries. Defined responsibilities.

Permission	 Technician	 Manager
 Submit Issue		
 Upload Evidence		
 Track Status		
 Review Evidence		
 Approve Resolution		
 Escalate		
 Reassign		
 Manage SLA		

Systems fail. Work shouldn't.

OpsBridge preserves workflow continuity through offline support, recovery mechanisms, escalation logic, and clear role ownership.

Mobile Experience

A seamless workflow that keeps technicians informed, guided, and aligned with managers.

EXPERIENCE OVERVIEW

Guides technicians from issue reporting to resolution through clear status tracking, evidence capture, and manager collaboration.

- 1  **Track**
Issue visibility
- 2  **Upload**
Evidence capture
- 3  **Respond**
Manager collaboration
- 4  **Resolve**
Task completion

Designed for field **efficiency**—clear guidance, evidence capture, and real-time communication keep technicians **productive** from issue detection to resolution.

Manager Decision Hub

A centralized workspace for reviewing evidence, coordinating actions, and resolving operational issues with confidence.

Operations Manager

Visibility

See all critical issues with context, evidence, and real-time status.

Decision Support

Review evidence and history in one place to choose the right resolution path.

Governance

Maintain auditability, ownership, and SLA compliance with ease.

Target Outcomes & Measurement Strategy

Defining success before launch.

OpsBridge was designed to improve operational coordination between field technicians and operations managers. Success would be evaluated through a combination of business outcomes and workflow metrics.

1. STRATEGIC OUTCOMES

Faster Resolution

Goal

Reduce Time-to-Resolution across operational exceptions.

Why It Matters

Faster issue handling minimizes downtime and service disruption.

Reduced Rework

Goal

Reduce rework & escalations through structured workflows.

Why It Matters

Clear ownership reduces coordination overhead and repeat work.

Better Compliance

Goal

Improve SLA Adherence & Audit Readiness.

Why It Matters

Improves accountability, visibility, and operational governance.

2. MEASUREMENT FRAMEWORK

SUCCESS METRIC

Time-to-Resolution

Measure

Exception Submitted → Resolved
Tracks overall operational efficiency.

ADOPTION METRIC

Workflow Completion Rate

Measure

Exceptions resolved without escalation
Indicates process clarity and workflow usability.

COLLABORATION METRIC

Decision Turnaround Time

Measure

Manager Request → Technician Response
Measures cross-role responsiveness.

Success Will Be Measured By Outcomes, Not Features

OpsBridge is designed to reduce resolution time, improve operational visibility, and strengthen accountability across field and office teams. The validation framework focuses on measurable workflow improvements rather than feature adoption alone.
