A Companion for the Mind

The Problem

Many people struggle to regularly recognise and articulate how they feel. Existing wellness tools often prioritise habits and routines over emotional self-awareness.

The Context

While many wellness apps focus on meditation, habits, or productivity, fewer support quick emotional reflection in a lightweight and non-clinical way.

Product Goals

- Provide users with a safe, judgment-free space to externalise emotions
- Encourage regular emotional self-check-ins without overburdening the user
- Visualise emotion trends in a meaningful, non-clinical way
- Blend intuitive UI with a calming, unobtrusive aesthetic

Target Audience

- Knowledge workers dealing with stress or burnout
- Teenagers and young adults seeking emotional clarity
- Anyone trying to build emotional awareness in daily life

User Journey at a Glance

A Calm, Focused Journey

MindMeld was intentionally designed to stay light, fast, and emotionally intuitive.

Here’s how a typical journey flows:

Step	Label	Short Description
1	Launch the App	User opens the app for a quick daily check-in
2	Choose how you feel	Select from emotion icons
3	Add a note (optional)	Reflect deeper through journaling
4	See your weekly trend	View your emotional graph in Insights
5	Done	Exit or browse further

Designing with Clarity

The app was intentionally structured to reduce friction, encourage emotional expression, and allow quick re-engagement. Each section is crafted with low cognitive load in mind.

Core Architecture Overview

Why This Matters

Cognitive Simplicity

- Encourages emotional honesty without enforcing it
- Minimises effort - each step can be skipped or expanded
- Cuts decision fatigue by limiting to one action per screen
- Ensures clarity in navigation even for first-time users

Quick, Repeatable Use

- Enables repeat use with quick entry and visual feedback
- Allows fast re-entry into the emotional check-in flow

Emotional Clarity & Trust

- Builds trust through consistent layout and visuals
- UI mirrors the logic of emotional processing

Wireframes at a Glance

Wireframing Approach for MindMeld

- Kept layouts uncluttered for emotional focus
- Reduced on-screen elements to ease cognitive load
- Ensured consistent flow across mobile screens
- Designed each step to build trust and encourage daily use

Why Wireframes Matter

- Validates design before full visual polish
- Helps stakeholders focus on function, not colour
- Enables quick iteration and testing before UI build
- Ensures IA translates cleanly to mobile constraints

Wireframe Thumbnails

1. Home
(Builds trust through a warm welcome)

2. Select Emotion
(Encourages quick daily reflection)

3. Add Note
(Supports deeper journaling)

4. Past Entries
(Provides perspective over time)

5. Insights Graph
(Reveals emotional trends)

6. Submit Confirmation
(Reinforces positivity & consistency)

From Structure to Emotion

With the wireframes validated, the next step was to refine them into high-fidelity screens. The focus was on clarity, emotional resonance, and visual consistency across the app.

Home → From structure to warmth

Select Emotion → From check-in to clarity

Insights Graph → From raw data to trends

Crafting Emotional Consistency

MindMeld's visual system was designed to be calm, approachable, trustworthy, and accessible. Every element from colours to typography, reinforces emotional clarity and ease of use.

Colours

Core palette derived from app gradients:

- Soft gradient palette
- Warm tones for positivity
- Cool tones for neutrality

Typography

MindMeld

A companion app for
well-being

*Clean, rounded sans-serif for
approachability*

Iconography

- *Expressive icons balance clarity and empathy*
- *Emotion labels accompany icons to support accessibility and clarity*

This design system ensured that every screen felt consistent, approachable, and emotionally attuned.

Outcomes, Learnings & Next Steps

Bringing MindMeld's design journey to a close

Outcomes

- Designed to keep daily check-ins under 15 seconds
- Made weekly emotion trends glanceable
- Balanced warmth with clarity in UI tone
- Prioritised a friction-free flow to encourage regular use
- Designed a repeatable daily reflection flow

Key Learnings

- Keep one action per screen to ease cognitive load
- Make journaling optional to deepen reflection without friction
- Use consistent iconography and typography to reinforce trust
- Early micro-copy choices strongly shaped emotional tone
- Gradients can serve as both aesthetic and functional cues

Next Steps

- Introduce gentle reminders for sustainable habits
- Expand Insights with monthly trends & comparisons
- Explore accessibility: contrast, tap targets, voice input
- Add multi-device sync for cross-platform continuity
- Introduce light journaling cues to inspire deeper self-reflection
